RETHINKING RISK TOLERANCE

• Outline

- Reviewing the traditional risk tolerance approach
- Exploring the new paradigm
- Distinguishing risk capacity from tolerance
- Incorporating risk perception
- Risk perception and client behavior
- Integrating application of aspects of risk
- Approaches to properly measure risk attitude
- Psychometrics and risk tolerance questionnaires
- Bringing it all together – the client risk profile
- Summary & Q&A

RETHINKING RISK TOLERANCE

- Reviewing the traditional approach
 - Time Horizon
 - Need for Income
 - Availability of other assets
 - Higher knowledge level about investments
 - Unwillingness to stay invested in down markets
- Individual questions tested, creating a total “risk” score

 @michaelkitces

RETHINKING RISK TOLERANCE

- Breaking apart the traditional approach
 - *Risk capacity*
 - Time Horizon
 - Need for Income
 - Availability of other assets
 - *Risk perception*
 - Higher knowledge level about investments
 - *Risk attitude/tolerance*
 - Unwillingness to stay invested in down markets

 @michaelkitces

RETHINKING RISK TOLERANCE

- Distinguishing Risk Capacity from Attitude
 - Separating income needs, time horizon, etc., from the client's willingness to trade-off risk for return
 - ***Capacity for risk = ability to withstand adverse market events***

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Distinguishing Risk Capacity from Attitude
 - Examples
 - John Smith needs income in 15 years. Income goal of \$15,000/year; future portfolio projected to be \$1,500,000.
High capacity for risk.
 - Betty Burton needs income of \$65,000/year, starting immediately, from a \$1,000,000 portfolio.
Low capacity for risk.

 @michaelkitces

RETHINKING RISK TOLERANCE

- Interaction between Risk Capacity and Attitude
 - Should be evaluated independently to evaluate conflicts
- Examples in the case of a low risk attitude
 - John Smith: High capacity for risk; low risk attitude. Can afford to invest for his low risk tolerance level.
 - *Traditional approach: Moderate growth portfolio*
 - Betty Burton: Low capacity for risk; low risk attitude. Cannot achieve his goals with his low risk tolerance level!
 - *Traditional approach: Conservative portfolio*

 @michaelkitces

RETHINKING RISK TOLERANCE

- Understanding Risk Capacity
 - Risk capacity measures the required rate of return necessary to (optimally) achieve the client's goals

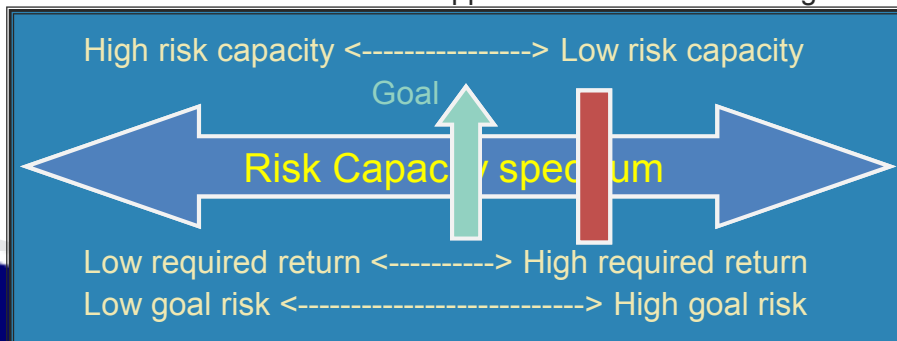

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR1

 @michaelkitces

RETHINKING RISK TOLERANCE

- Understanding Risk Capacity
 - High risk capacity allows for any risk attitude
 - Low risk capacity *requires* high tolerance!
 - Risk attitude defines the upper limit of risk relative to goal

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR1

 @michaelkitces

RETHINKING RISK TOLERANCE

- What about risk perception?
 - Does client risk attitude change with the markets?
 - Stability of risk attitude vs. variability of risk perception
 - Client behavior changes as perception of the market's risks shift
 - Bull market perceptions
 - Bear market perceptions

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Understanding risk perception?
 - The betting game: Flip a coin
\$2 for heads, \$0 for tails
 - How much will you pay to play?
 - High or low risk attitude?

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Understanding risk perception?
 - Playing the game
 - 5-game winning streak
 - 10-game winning streak
 - Changing the odds
- Did the attitude change, or just the perception of risk

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Risk perception and behavioral finance
 - Common mental heuristics in risk perception
 - Availability
 - Overconfidence
 - Loss Aversion
 - Representativeness
 - Familiarity
 - Recency
 - Knowledge and education vs. fear of the unknown

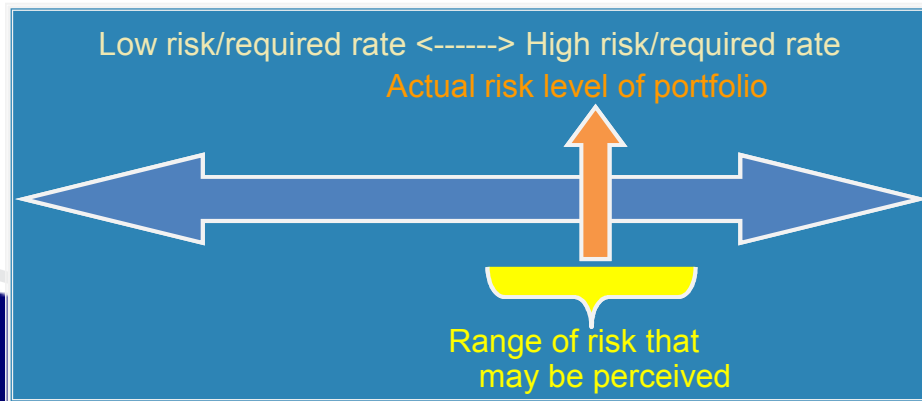

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Risk perception relative to actual risk
 - Clients tend to perceive risk in a range around the portfolio's actual level of risk

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Integrating the risk profile components
 - Risk capacity determines how much risk a client can afford to take, or needs to take, to achieve goals
 - Risk attitude establishes the upper limit on the amount of acceptable risk
 - Risk perception connects the client's evaluation of whether the implemented portfolio is consistent with the client's risk attitude
 - Requires constant tuning and management

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPARI

 @michaelkitces

RETHINKING RISK TOLERANCE

- Measuring risk attitude – questionnaires & psychometrics
 - Psychometrics – the science of psychology test construction
 - Evaluate questions for understandability and answerability
 - Test the test questions on subjects
 - Evaluate test results relative to anticipated behaviors
 - Validity – does the test measure what it purports to measure?
 - Reliability – does the test measure consistently?

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR

 @michaelkitces

RETHINKING RISK TOLERANCE

- Measuring risk attitude – questionnaires vs. conversations
 - Conversational approach
 - Easier and more comfortable for some advisors
 - Able to explore nuanced client issues
 - Difficult to perform consistently
 - Risk of planner affecting client results
 - Questionnaire approach
 - Critical to use well-designed measure (www.finametrika.com)
 - Easier to measure abstract concepts
 - Standard process, allowing for comparison but lacking flexibility
 - *Blended approach best practice?*

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR

 @michaelkitces

RETHINKING RISK TOLERANCE

- Bringing it all together
 - Risk capacity
 - Measured using the financial planning process
 - Key capacity measures incorporated in retirement planning analysis
 - Risk attitude/tolerance
 - Measured via questionnaire
 - May incorporate conversation aspects as well
 - Risk perception
 - Critical both upfront, and as part of the ongoing process
 - Key aspect of managing client expectations

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR1

 @michaelkitces

RETHINKING RISK TOLERANCE

- Bringing it all together

High risk capacity <-----> Low risk capacity
Low required rate <-----> High required rate
Low goal risk <-----> High goal risk

Client's selected portfolio Maximum tolerable risk

© 2015 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR1

 @michaelkitces

RETHINKING RISK TOLERANCE

- Stability of Risk Tolerance

- Scores trended down slightly
- Perceptions shifted significantly!
- Tolerance rebounded quickly, perceptions did not

© 2010 Michael Kitces | kitces.com

Handouts/Materials: kitces.com/FPAR

@michaelkitces

RETHINKING RISK TOLERANCE

- Summary

- Risk capacity must be measured separately from risk attitude/tolerance!
- Risk capacity is evaluated as part of the financial planning process
- Risk attitude is best evaluated via a psychometrically-designed questionnaire
- Risk perception shifts and must be managed constantly
- An integrated approach allows the planner to optimally address the client's overall risk profile
